

```
1 For Snippet 1:
2 1. Run the code to see any bugs reported by the console.
3 2. Console detects an error on line 2, specifically on "+1", stating: "TypeError: can
  only concatenate str (not "int") to str"
4 3. Remove the "+1" on line 2.
5 4. Run the code again with the console now no longer detecting any bugs on the code.
6
7 For Snippet 2:
8 1. Run the code.
9 2. Console detects an indentation error stating "IndentationError: expected an indented
  block after function definition on line 1"
10 3. Add an indent to line 2 and run the code again.
11 4. Console detects a syntax error on line 2, stating that a colon (:) was expected at
  the end of the line.
12 5. Run the code again after adding the colon on line 2, the console this time detecting
  another indentation error as it was expecting an indentation block after line 2, but
  could not find it.
13 6. Indent line 3 and then run the code again, with no errors detected by the console and
  a file titled "output.txt" being created with the line "Hello, How do you do?" being
  displayed.
```
